PROJECT PROFILE & BACKGROUND INFORMATION

- a) Cybersecurity is a twenty-first century challenge requiring a twenty-first century workforce. The current cybersecurity workforce lacks sufficient professionals with the skills, training and credentials to meet this cutting-edge challenge. Market studies predict that this talent and skills gap will continue to widen among current and prospective cyber professionals over the coming years. This cybersecurity workforce gap presents tremendous risk to government, business and society.
- b) Organizations or individuals seeking cybersecurity education, workforce development, training or skills face a dearth of simulated environments like those found in professional fields like aerospace, business or medicine. Compounding this challenge for the cybersecurity profession include a multitude of factors, including but not limited to the realism of training, the legality of potential training exercises, the capabilities of training platforms, the customizability of training methods, the accessibility of training environments, and the scalability of training models.
- c) A key tool and platform for reducing the skills gap and securing government, business and society is the Cyber Range Platform which is interactive, simulated platform including representations of networks, systems, tools, and applications. They typically provide a safe, legal environment to gain hands-on cyber skills and a secure environment for product development and security posture testing for any organisation. Cyber ranges can play a central role in facilitating and fostering cybersecurity education, training and certification in any digital ecosystem.
- d) Conventional education and training models are insufficient to fill the cybersecurity skills gap. Cyber ranges provide enabling technology to operationalize, predict, and monitor the training and performance of cybersecurity professionals. Cyber ranges instil confidence in cybersecurity workforce seekers and cybersecurity workforce employers that training will predict job success.
- e) Cyber ranges can: -
 - a. Provide performance-based learning and assessment
 - b. Provide a simulated environment where teams can work together to improve teamwork and team capabilities
 - c. Provide real-time feedback
 - d. Simulate on-the-job experience
 - e. Provide an environment where new ideas can be tested and teams can work to solve complex cyber problems
- f) Cybersecurity professionals of state government require hands-on and specialized education and training. The cyber range is identified as a valuable tool and catalyst to be utilized in these efforts.
- g) The potential use-cases identified for deploying a cyber range are: -
 - a. To implement basic and advanced cybersecurity education courses and curricula.
 - b. Training and continuing education for security operations, analysis, forensics and incident response.
 - c. Situational operations testing for new products, software releases, and organisation restructuring.
 - d. Cybersecurity skills validation to evaluate candidates for various cybersecurity positions
 - e. Workforce training for people moving into cybersecurity-related fields and positions.
- h) The aforementioned potential use-cases would serve a number of potential objectives including improving individual and team knowledge and capabilities from diverse groups; applying knowledge in a simulated network environment, developing cyber skills, working as teams to solve cyber problems, preparing for cyber credentialing examinations or assessments; evaluating cyber capabilities, testing new procedures, and training teams on new organizational and technical environments and protocols.
- i) Hence, to close the cybersecurity workforce gap by engaging, implementing, or utilizing a cyber range platform and to address all the identified potential use-cases mentioned above, RajComp Info Services Ltd. (RISL), on behalf of Department of Information Technology and Communication (DoIT&C), Government of Rajasthan (GoR), hereby invite eBids for Supply, Installation, Integration, Commissioning, Operations & Maintenance (Three Years) of CYBER RANGE Platform for its Cyber Centre CoE at Jaipur, Rajasthan.

- j) The proposed platform (on-premise) would be based on the NIST's National Initiative for Cybersecurity Education (NICE) recommended Framework and hosted at state-of-the-art Rajasthan State Data Centre (Tier-IV Certified), Jhalana Dungri, Jaipur, Rajasthan.
- k) A typical illustration of cyber range platform as per NIST's NICE framework is given below for ready reference.

- l) Rajasthan Security Operations Centre (RSOC) is also established at RSDC, Jaipur and is operating on a 24x7 basis since year 2018 so as to protect overall digital ecosystem of state government from current and emerging cyber threats.
- m) The Cyber Range platform would primarily help the RSOC Analysts on specialised education and training using LIVE pre-packaged scenarios but the proposed stakeholders of the Cyber Range platform would be: -
- State Govt. employees seeking workforce training and continuing education for security operations, analysis, and forensic specialists;
 - State govt. academia seeking training, skills validation, or range exercises and to implement basic and advanced cybersecurity educations courses and curricula;
 - Residents of state having pre-requisite technical skills and willing to move into cybersecurity related fields and positions.
- n) Prospective bidders, with prior permission from Project OIC of RISL/DoIT&C, are strongly advised to visit the facility for better understanding of the existing environment i.e., RSDC and RSOC at Jhalana Dungri, Jaipur (Raj.) including the deployed infrastructure. A written request for same may be sent.
