## **2. PROJECT PROFILE & BACKGROUND INFORMATION**

### **1) Project Profile**

- 1) Atal Bujal Yojana is central sector scheme with an outlay of INR 6000 cr. Out of which INR 3000 cr. will be as loan from the World Bank and INR 3000 cr. as matching contribution from Government of India. The funds under the scheme shall be provided to the states as grant-in-aid. Thus there would not be any burden over state exchequer for implementation of this scheme. The World Bank financing will be done under the new lending instrument, that is, Program for Results (P for R) wherein funds under the scheme will be disbursed from the World Bank to the Government of India based on achievement for pre-agreed results.
- 2) The States have been selected based on number of criteria, including degree of groundwater exploitation and degradation, established legal and regulatory instruments, institutional readiness and experience in implementing initiatives related to ground water management. The selected states account for about 37% of the total number of water-stressed (over exploited, critical and semi-critical) blocks in India. They are underlined by two broad types of aquifer systems found in India i.e. alluvial or unconsolidated aquifers and hard rock or consolidated aquifers and span a broad spectrum in terms of established legal and regulatory provisions, institutional readiness and experience in groundwater management. The districts/blocks/gram panchayats for implementation of the scheme in the identified states have been finalized by the respective states. In general these areas are over exploited or water stressed. Addressing various challenges with respect to ground water including over-exploitation is expected to have a significant impact in ensuring sustainable management of available ground water resources in these States.

### 3) Area of Coverage of the Scheme:

As informed by Director, NPMU – Atal Bujal Yojana, Department of Water Resource, Rural Development and Ground Water, Ministry of Jal Shakti, government of India vide Government order no. T-81011/12/2020 – Atal Jal Section dated 11-09-2020, this scheme will be implemented in 17 districts of Rajasthan covering 38 Talukas and 1144 gram panchayats. However, 140 of these gram panchayats already have piezometer installed with TDWLR. Therefore only 1004 gram panchayats are required to be covered under the scheme. Ground Water Department is the nodal agency to implement the scheme in the state of Rajasthan

Districtwise number of gram panchayats to be covered under the scheme have been provided in Annexure – 15. Summary of the scheme coverage is as below:

<b>STATE</b>	<b>Districts</b>	<b>Talukas</b>	<b>Gram Panchayat</b>
RAJASTHAN	17	38	1004

As per the guidelines issued for this program, 1004 Gram Panchayats in State of Rajasthan must have a piezometer fitted with Telemetric Digital Water Level Recorder and integrated with WIMS for real time monitoring of the water level in these Gram Panchayats.

The summary of the goals of the new system are:

- To improve efficiency by way of systematic record keeping and timely information.
  - To enable data acquisition and data communication using GSM/GPRS between remote station and WIMS
  - To integrate the data with WIMS.
- To store data in data logger/remote stations for defined time period.
- To check the existing duplication and redundancy.
- To implement routine functions leading to increase in productivity.

The summary of the Scope of work that has been earmarked for this proposed project is as below:

- Automatic uploading/transfer of data from TDWLR to WMIS.
- Calibration of the installed TDWLR system to be undertaken on half yearly basis
- Facility Management Services for the period of three years after completion of above mentioned scope of work and issue of Go-Live.

##### **(A) Supply & Installation of TDWLR:**

TDWLR stands for Telemetry Digital Water Level Recorder. A telemeter is a physical device used in telemetry. It consists of a sensor, a transmission path, and a display, recording, or control device. **Telemetry** is the in situ (on site) collection of measurements or other data remote points and their automatic transmission to receiving equipment (telecommunication) for monitoring. Most of the modern telemetry systems take advantage of the low cost and ubiquity of GSM networks to receive and transmit telemetry data.

**Digital Water Level Recorder (DWLR)** is a system used to measure groundwater level. It is designed to calculate the water column on hydrostatic pressure. This system is used to monitor the water table. It mainly consists of a data cable, data logger, and communicator & UI application. The pressure-sensing device is equipped in a submerged troll with a data collector module. The data is collected on defined time intervals and the data is transmitted through the data cable to the

communicator. The communicator transmits the data to the WIMS server. The data is displayed in Water Column, Water Level from Ground Surface, Water Temperature, etc.

Ground water is among the Nation's most precious natural resources. Measurements of water levels in wells provide the most fundamental indicator of the status of this resource and are critical to meaningful evaluations of the quantity and quality of ground water and its interaction with surface water. The Digital Ground Water Level Recorder is a data logger and submersible pressure transducer combination designed for remote monitoring and recording of water level or pore pressure data. The sensor is lowered into the well on a reinforced cable and submerged below the water. Once in place, the initial water pressure reading is synced with the current water level. The unit then monitors the water pressure for changes, and the pressure difference is converted to a change in water level. The entire unit is hermetically sealed to prevent any moisture from getting into the instrument's circuitry. The instrument comes along with inbuilt memory and GPRS enabled web telemetry for remote communication of data.
